

Teacher Vocab Checklist (Pre-Game)

For the rule-explainer to fill out around teaching. Goal: separate vocabulary the player **generated from the experience** from vocabulary the player **received from the teacher**. File alongside the player's onboarding feedback form.

Date: _____

Player taught: _____

Teacher (you): _____

Stack / rule state: _____

1

SECTION

Before teaching — commit to avoidance

Cross out the words you will deliberately avoid using during this rule explanation. The point is not to teach the game wrong — it's to not seed the vocabulary the player would otherwise have to invent themselves.

Combo-coded	Combo-coded	Combo-coded
combo	setup	chain
sequence	synergy	build
amplify	enabler	payoff

Note: chassis-coded words (move, capture, position, control, attack, defend, kill) are part of the rules and should NOT be avoided — they are necessary for explanation. We are tracking which combo-coded words leak into teaching, not which chassis words do.

Combo-coded words I will deliberately avoid this session:

One-sentence pitch I will use to introduce the game (write it out exactly):

2 SECTION After teaching — record what actually happened

Fill out IMMEDIATELY after teaching ends, before the game starts. Be honest — this is for analysis, not self-evaluation.

Of the combo-coded words above, which ones did you actually use during teaching? (mark each one)

Word	Used? (× once / × × multiple / — not used)	Context (which rule were you explaining?)
combo		
setup		
chain		
sequence		
synergy		
build		
amplify		
enabler		
payoff		

Other combo-flavoured language you used that isn't on the list above:

Did the player use any combo-coded vocabulary during the teaching itself (e.g., asking "so this is like a combo?" or "is this how I'd build a sequence?")? If so, which words and in what context?

Anything else about the teaching session that might affect how the player describes the game afterwards? (e.g., they had played a similar game before, you accidentally demoed a combo, etc.)
